Summary

Senior Frontend Engineer with 8+ years of experience building high-performance, AI-powered web applications with **React.js, Next.js, and TypeScript**. Specializes in taking LLM features from prototype to production — **RAG pipelines, agentic workflows, streaming chat interfaces, and evaluation/guardrail systems** — paired with deep expertise in SSR/SSG architecture, component-driven UI, and performance optimization. Experienced across the modern AI stack (OpenAI, Anthropic, LangChain, vector databases) and with the product craft that makes AI features feel fast, trustworthy, and genuinely useful. Adept at collaborating across product, design, and backend teams to ship AI capabilities that move real metrics.

Experience

Senior Software Engineer **(Jan 2026 – Present)**
Uare.ai, Los Altos, CA

- Spearheading development of a social media content publishing platform using **Next.js, React, and TypeScript**, enabling programmatic publishing across YouTube, Instagram, and LinkedIn.
- Built the platform's **AI content engine** on OpenAI and Anthropic APIs — prompt engineering, **structured outputs (JSON schema / function calling)**, and streaming token responses — powering caption generation, hook rewriting, and platform-specific tone adaptation, lifting user content output **3x**.
- Implemented a **RAG pipeline** with embeddings and a **vector database (pgvector / Pinecone)** — semantic chunking, hybrid retrieval, and re-ranking — so generated posts stay grounded in each brand's voice, past top-performing content, and product documentation.
- Engineered **multi-step AI agents** with tool/function calling that autonomously research trends, draft a content calendar, and schedule posts across channels, orchestrated with **LangChain** and **n8n** — cutting manual planning time by ~70%.
- Designed the **AI UX layer**: streaming chat copilot, inline diff-style suggestion accept/reject, regeneration controls, and **human-in-the-loop review gates** before any content publishes.
- Stood up an **LLM evaluation harness** with golden datasets, automated regression scoring, and hallucination / brand-safety guardrails, catching prompt regressions before release.
- Cut **LLM cost per generation by ~40%** through model routing (small model first, escalate on complexity), prompt caching, and token budgeting, with graceful provider fallback for uptime.
- Architected a scalable, component-driven frontend on **Azure** with SSR/ISR rendering strategies, achieving sub-second page loads and improved Core Web Vitals scores.
- Built multi-platform social media API integrations (OAuth flows, content scheduling, comment management) with robust error handling and rate-limit resilience.
- Integrated **Stripe payment processing** (subscriptions, one-time purchases, and webhook handling) and **HubSpot CRM** to unify billing, analytics, and customer lifecycle management.
- Designed and built a responsive, accessible UI with **Tailwind CSS**, supporting complex workflows like bulk content uploads, analytics dashboards, and multi-account management.
- Implemented CI/CD pipelines with **GitHub Actions** and **Docker**, streamlining deployments and reducing release cycles from days to hours.

Senior Software Engineer **(Dec 2020 – Jan 2026)**
Apple/Infosys, Sunnyvale CA

- Lead Front-End Developer for SAP HANA-based enterprise applications, delivering scalable and performant solutions with **React and Next.js**.

- Developed and maintained **Next.js applications** with SSR/SSG capabilities, improving SEO by 50% and reducing initial load time for core features.
- Created modular, reusable UI components with TypeScript and integrated **Next.js API routes** to streamline backend communication and reduce latency.
- Architected scalable state management solutions using Redux and React Context API, reducing prop-drilling complexity by 40% across 10+ modules.
- Optimized performance using lazy loading, dynamic imports, and memoization strategies in React and Next.js.
- Built cross-platform mobile apps using React Native, reducing development time by 35% while maintaining a consistent design language.
- Collaborated cross-functionally with UI/UX designers, backend developers, and product teams to translate complex requirements into elegant user experiences.
- Conducted peer code reviews and mentored junior developers on modern React and Next.js best practices.

Freelance Front-End Developer **(Jul 2019 – Nov 2020)**
SCIF, Pleasanton CA

- Developed responsive UI components using **React.js, HTML5, CSS3, Bootstrap, and JavaScript**, focusing on performance and accessibility.
- Integrated **Next.js** for SSG-based marketing pages and internal tools, reducing page build times by 60% and simplifying deployment.
- Improved site speed by 30% using React Hooks and optimizing client-side rendering patterns.
- Implemented Material UI for consistent visual design and seamless component integration.
- Worked in Agile sprints, delivering updates and collaborating closely with business stakeholders to refine UI requirements.

Software Developer **(Jul 2017 – June 2018)**
GCMT Herbal PVT LTD, India

- Designed and developed an **adaptive e-commerce platform** with a **responsive UI/UX**, ensuring seamless performance across all device sizes.
- Built a **filter-rich, high-performance search engine** using **Elasticsearch**, delivering results within milliseconds.

Technical Skills

- **AI / ML:** OpenAI API, Anthropic Claude API, LLM prompt engineering, function calling & structured outputs, RAG, embeddings & vector search (pgvector, Pinecone), LangChain, AI agents, streaming (SSE), LLM evals & guardrails, n8n
- **Frontend:** React.js, **Next.js**, TypeScript, Redux, React Context API, HTML5, CSS3, Tailwind CSS, Material-UI, Bootstrap
- **Backend / APIs:** Node.js, Express.js, REST APIs, **Next.js API Routes**, SAP HANA XSJS, Spring Boot
- **DevOps / Tools:** AWS (EC2, S3), Azure, Docker, Git, GitHub Actions, Jest, ESLint, Prettier, Postman
- **Databases:** MongoDB, PostgreSQL (pgvector), MySQL, Firebase, SAP HANA, Redis

Education

Master of Science in Computer Engineering May 2020
International Technological University, San Jose, CA

Bachelor of Engineering in Electronics Jul 2018
Government Engineering College, Gandhinagar, India

Projects

Investment Portfolio Tracker GitHub: https://github.com/Ronnie434/IPT

Tech Stack: NextJS, TypeScript, NodeJS, Python, PostgreSQL, Redis, Prisma

- Developed a full-stack dashboard to track Robinhood investments with real-time updates.
- Fetched and analyzed stocks, options, and dividends using secure backend services.
- Used Redis for caching and Prisma for efficient database operations.

Task Management API GitHub: https://github.com/Ronnie434/Task-Mangement-API

Tech Stack: Node.js, Express, MongoDB, JWT, Socket.io

- Developed a secure RESTful API for task and project management with user authentication via JWT.
- Enabled real-time task updates and notifications using Socket.io for seamless team collaboration.
- Designed scalable MongoDB schema to support multi-user task tracking and role-based access.
